2. 9"x4.5"x3" 3000F 2880 Pieces
3. 9"x4.5"x2.5" 2800F 3000 Pieces
4. 9"x4.5"x2.5" 2600F 1800 Pieces
5. 9"x4.5x3" 2600F 1920 Pieces

Ceramic Fiber Blanket

1. 1"x24"x25' 2600F 8lb. Density 50 Boxes
2. 1"x24"x25' 2600F 6lb. Density 50 Boxes
3. 1"x24"x25' 2300F 8lb. Density 50 Boxes
4. 1"x24"x25' 2300F 6lb. Density 195 Boxe

- Currently all our products on order from our customers have not been affected by the CORVID-19 virus. All manufacturing and deliveries are currently on schedule. Thanks to our logistics team for putting in the extra work to keep our MIG Refractory Products on schedule for our valued customers
- We have currently started putting together our physical lab testing equipment at our Princeton Illinois Manufacturing facility. Our First piece equipment that has been added is the cold crush testing equipment and will allow our manufacturing to test all materials properly out of our manufacturing plant. It is a computerized system that will be very precise and accurate. The information gathered from each test can be passed along to the customer for assurance of our products.
- MIG Refractory Products castable Line is making progress, looking for a 4th Quarter 2020 start up. Mixers and equipment are currently being installed and raw materials have been ordered. Our Goal is to offer top quality castables and to work with customers to improve the product as they feel the need too, so if they feel they have something that they feel may work better we will make to any specification that is needed

Our Goal with the castable line is to be just not an ordinary castable supplier but to work to make the product as superior as possible. If the customer has a suggestion to make the product better, we will work hand and hand with the customer to meet and exceed their expectations instead of just offering the standard castable.

- Our Mag-Carbon brick continue to meet and exceed our customers goals, we are expanding our market share in the industry. Please contact us for any questions and all inquiries are welcome and we can make to your specification.

MIG Refractory Products and Services Ceramic Welding

MIG Refractory Products and Services offers a Complete Ceramic welding training program that can be completed on site or at one of our locations. The Program instructs on how to clean material from the brick using proper tools and techniques, ceramic welding machine operation, job safety hazard analysis, welding techniques, and a complete training manual. Simulated spalls and deep cracks will be used when instructing the trainee in various techniques.

We feel that the customer should be in full control of the maintenance program, with the in-house training of their employees it has the employees more involved and wanting to take some ownership into the facility. Helps reduce the need of outside contractors and management can dictate their repair needs.

We can offer many package options for the end user.

Contact us for more information, we can find a way to work together

Featured Product

This month featured product is Bottom Pour Refractories

Description for Bottom Pour Refractories

MIG Refractory Products and Services bottom pour refractory materials are made with various types raw material with superior quality and the process under stringent quality control.

MIG Refractory Products bottom pour refractory include, but not limited to: Fireclay, High Alumina, Mullite and other customized materials to meet and exceed for the specific operation.

Our products offer:

- Excellent acid and flux resistance
- Excellent thermal shock resistance
- Excellent mechanical resistance
- Extended refractory service life
- Reduced operation and maintenance costs
- Precise dimensions with stringent dimensional tolerances for all shapes
- Clean castings with minimal refractory inclusions
